

RUGGED. STRONG. STEEL.

COBRA® PRO STYLE **steel**

The COBRA® PRO STYLE steel is a buckle that meets the requirements of the standard for respiratory protective equipment (EN 137). Thanks to its reliable locking mechanism, the higher durability and AUSTRIALPIN's meticulous quality assurance, this buckle will hold up to almost any beating that it will encounter and offers the safety that you need in the toughest environments. Guaranteed 18 kN tensile strength in loop configuration.

COBRA® PRO STYLE steel

The COBRA® PRO STYLE made of steel is a buckle that meets the requirements of the standard for respiratory protective equipment EN 137. Like the COBRA® PRO STYLE made of aluminium, the steel version can only be opened when released by pressing both clips at the same time. The locking mechanism thereby allows easy engagement of the interlocking components, which is confirmed by a distinct clicking sound. One-sided locking is nearly impossible. The locking mechanism guarantees a safe application at any time. The large cut-out on the backside prevents dirt, dust, ice or snow from getting caught in the buckle, which increases its performance capabilities and lifetime even more. All COBRA® PRO STYLE steel (FT) sizes and variants are mutually compatible. In combination with a fitting webbing, the minimum guaranteed load capacity is 18 kN in loop configuration.

The COBRA® PRO STYLE steel is not compatible with aluminium parts or styles!
